

US159-DA16600EVZ

DA16600 Pmod™ Board

The US159-DA16600EVZ is an ultra-low power Wi-Fi + Bluetooth™ low energy combo Pmod module that provides both low power Wi-Fi and low power BLE functionality to your device. The DA16600 integrates the low power Wi-Fi DA16200 SoC and the low power Bluetooth LE DA14531 SoC on a single module. Together they deliver long battery life and low power consumption in a convenient form factor. As a single integrated system, standard functions are available such as provisioning Wi-Fi through the BLE connection and Wi-Fi/BLE coexistence.

The US159-DA16600EVZ features a Type 3A Pmod connector, incorporates the DA16600 module, and combines low power Wi-Fi with low power Bluetooth capability in a single module. With its standard connector and software support, the US159-DA16600EVZ is ideal for the Renesas Quick-Connect IoT to rapidly create an IoT system.

Kit Contents

- US159-DA16600EVZ Pmod Board

Features

- DA16600MOD-AAC4WA32 module
 - 3.3V supply voltage
 - Integrated chip antenna
 - Cortex-M4F+ at 30MHz to 160MHz and Cortex M0+ at 16MHz
 - 802.11b/g/n radio PHY, 2.4GHz
 - Bluetooth 5.1 core qualified
 - SoC runs full OS and TCP/IP stack
 - Memory: 256 kB ROM, 512kB RAM, 8kB OTP, 48B retention memory and 32Mb SPI Flash
 - RF regulatory certifications: FCC, IC, CE, KC, TELEC, and SRRC
 - Wi-Fi Alliance certifications: Wi-Fi CERTIFIED b/g/n, WPA, WPA2, and WPA3
- Standardized Type 3A Pmod connector supports an expanded UART interface
- LED (D1) to aid in user software debug
- 10-pin 1.27mm pitch Arm Cortex-Debug connector (J2) for software development and debug support

1. Functional Description

The US159-DA16600EVZ functions as a Wi-Fi and Bluetooth wireless building block to create a custom IoT system solution. This module adds Wi-Fi and Bluetooth connectivity capability to any IoT system that supports Pmod expansion modules. For a full list of available sensor Pmod boards, visit the Quick-Connect IoT web page on the Renesas [website](#).

2. Setup

2.1 Required or Recommended User Equipment

The following additional lab equipment is recommended for using the board (and is sold separately):

- An MCU board that supports Type 3A Pmod.

2.2 Software Installation and Usage

For the latest version of the e2 studio, use the Renesas [website](#), and for the latest connectivity support and details on creating customized IoT system solutions, visit the Quick-Connect IoT [site](#).

The Renesas Flexible Software Package ([FSP](#)) is an enhanced software package designed to provide easy-to-use, scalable, high-quality software for embedded system designs using Renesas RA family of Arm Microcontrollers. With the support of a new Arm TrustZone and other advanced security features, FSP provides a quick and versatile way to build secure, connected IoT devices using production-ready drivers, Azure RTOS, FreeRTOS, and other middleware stacks.

The firmware for operating the module is pre-loaded on the US159-DA16600EVZ Pmod module.

Firmware	
DA16600 v3.2.2.0	Standard DA16600 SDK

For more details on the application, see the [documentation](#), *Quick-Connect IoT DA16600 Provisioning Demo*.

2.3 Kit Hardware Connections

Follow these procedures to set up the kit as shown on [Figure 2](#).

1. Ensure the MCU evaluation kit being used has a Pmod connector set to Type 3A. (For help, refer to the kit hardware manual.)
2. Plug in the US159-DA16600EVZ to the Pmod connector on the MCU evaluation kit, and be careful to align Pin 1 on the module to Pin 1 on the MCU kit.
3. The US159-DA16600EVZ is now ready to be used in the system. Follow the MCU kit instructions for connecting and powering up the evaluation kit.
